2.	Change language setting in Arachne	3

1. Introduction

The Arachne interface or client application is available in 23 languages since 15th August 2017. This document explains how an Arachne user can select or change the language setting.

2. Change language setting in Arachne

The language setting can only be changed in the Arachne application itself. When an Arachne user connects for the first time to Arachne, the default language 'English' is selected.

This default language setting can be changed via the 'Parameters' option in the main menu.

Select 'Languages' in the Parameters menu:

Click 'Yes' to save your changes

Exit and restart the Arachne application

Note that 'Disconnect' / 'Connect' are not enough to have the full interface available in your language.

Most of the labels are only retrieved when you start Arachne from scratch.
